December 3, 2008

Name _____

Find the solutions to the following exercises. Answers without justifying work will receive no credit. Partial credit will be given as appropriate, do not leave any problem blank. Each problem is worth 10 points. Your completed assignment is due at class time on Friday, December 5, 2008.

1. Suppose that the fish population is growing exponentially and the local authorities decide to give out fishing licenses that allow a total of h fish per day to be caught over a 30-day period. If $P(t)$ denotes the population of fish in the lake at time t then

$$P'(t) = kP(t) - \begin{cases} h & \text{for } 0 \leq t \leq 30 \\ 0 & \text{for } t > 30. \end{cases}$$

- (a) If $P(0) = P_0$, find $P(t)$.

- (b) Find a relationship between P_0 , h , and k so that $P(360) = P_0$.

2. A wooden beam with ends at $x = 0$ and $x = L$ will bend when a load of $W(x)$ is placed on the beam. The amount of bending is modeled by the IVP:

$$\begin{aligned}y^{(4)} &= W(x) = \begin{cases} W_0 & \text{for } 0 < x < L/2 \\ 0 & \text{for } L/2 < x < L. \end{cases} \\y(0) &= 0 \\y'(0) &= 0 \\y''(0) &= 0 \\y'''(0) &= 0\end{aligned}$$

Solve the IVP for $y(x)$.

3. Evaluate $\mathcal{L}\{\delta(t - \pi) \cos t^3\}$ where $\delta(t)$ denotes the Dirac delta function.

4. Evaluate the following improper integral.

$$\int_{-\infty}^{\infty} e^{(t-1)^2} \delta(3t) dt$$

5. Evaluate the following improper integral.

$$\int_{-\infty}^{\infty} \delta'(t) f(t) dt$$
